

Decentralized Resource Token version 2 (DRTv2)

The Mirror Engine of Post-Fiat Contribution

Founded by Jordan Schwartz

May 06, 2025

Abstract

DRTv2 is the mirrored counterpart to DRTv1, forming a dual-token, closed-loop economic system governed entirely by trustless AI. Both tokens are minted solely through verified resource contributions, creating a value network backed not by speculation or fiat input, but by action, merit, and immutable protocol.

1. Purpose

DRTv2 is designed to complement DRTv1 by forming a closed liquidity mirror that reinforces stability, scarcity, and verifiable value. The system creates a self-referencing loop of contribution-backed tokens that serve as anchors for post-fiat economic interaction.

2. Minting System

DRTv2 tokens can only be minted when a resource or proof of value is submitted via the DRTv2 Submission Portal. A trustless AI model evaluates the input and determines the mintable value. No token is ever minted arbitrarily. This ensures that all circulating supply is backed by real human or AI-recognized effort.

3. Liquidity Architecture

The DRTv2 token is paired with DRTv1 in a Uniswap pool anchored by initial dual-token seeding. Both tokens are priced at a 1:1 ratio, each with a valuation based on prior earned mint history and AI-audited scarcity. The result is a highly visible, self-contained liquidity monument where value is preserved, not extracted. Additional side pools (e.g., DRTv2/ETH) may reflect this value in fiat or ETH terms but are not required for system integrity.

4. Economic Principles

- No fiat dependence
- No VC funding or presale
- No open minting
- No price manipulation
- No speculative inflation

5. Use Cases

- Participation in DRT-governed systems
- Token-for-token swaps via the mirror pool

- Value storage backed by contribution
- Research into AI-governed economic mechanisms

6. Governance

There is no central authority. The AI evaluation system is open-source and auditable. Token availability is solely based on input quality and validator response. The community will eventually oversee parameter updates and submission review standards.

7. Vision

DRTv2 exists not to replace currency, but to reintroduce meaning to it. It is a tool for recognizing and preserving value born from conscious action. Together with DRTv1, it forms the foundation of a contribution-based economy, capable of operating independently of speculation, inflation, and systemic debt.
